Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:

Step 2: Domain Choice
What domain did you choose to fine-tune the Meta Llama 2 7B model on?
Choices:
  1. Financial
  2. Healthcare
  3. IT
	IT

Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the **model_evaluation.ipynb file**?	because ubiquitous computing is intended to > be pervasive, inexpensive, and unobtrusive. The authors of the paper were Dr. Paul Dourish, Professor of Informatics at the University of California, Irvine, and Dr. Genevieve Bell, Senior Researcher at Intel Labs. The paper
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the **model_finetuning.ipynb file**?	because ubiquitous computing is intended to > be a user-centric technology, it is important to focus on the users' needs and requirements. ubiquitous computing can be understood as the realization of a ubiquitous computing system. the system is composed of a number of components, which are collectively referred to as a ubiquit
